**Notice of Allowability**

**Reasons for Allowance**

1. The following is an examiner's statement of reasons for allowance: Claims 1-39 are allowable upon consideration of the prior art. The closest prior art is US Patent No. 5,023,276 (Yarrington et al). Yarrington et al disclose a process and apparatus for making synthesis gas comprising: heating an air stream, steam stream and hydrocarbon feed stream; supplying the heated gas streams into an autothermal reformer to produce a synthesis gas; separating the carbon dioxide from the synthesis gas; and recycling the carbon dioxide back to the autothermal reformer.

The prior art fails to disclose or suggest recycling and introducing a portion of the syngas effluent from the autothermal reformer into the feed gas stream to obtain a feed mixture comprising hydrogen; wherein the ratio of recycle gas to gas feed stream is from 0.2 to 1. Additionally, the prior art fails to disclose or suggest the use of a thermo-compressor ejector as instantly claimed in claim 31, and fails to disclose or suggest an apparatus further comprising "means for introducing a portion of the syngas effluent stream as a recycle gas into the gas feed stream at a thermo-compressor ejector positioned in the feed line."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
